

## Patient Portal Security

### (Multi-factor Authentication)

To ensure only authorized users can access your account, the patient portal now requires multi-factor authentication (MFA).

To use MFA, you'll need to verify your email. Click **"Send Code"** after you log in to the patient portal.

After your email is set up, we will send you a six-digit code each time you log in to the patient portal. Enter the code and click **"Verify"**.

*Note: If you do not receive a verification email, check your **Spam** folder. You can also confirm that your patient portal account email address is accurate with your provider's office.*
